WOLFF LITE

WOLFF Lite is the next generation in tower crane signage, combining high-impact visibility with a lightweight, versatile design. Weighing less than half of a traditional media screen, with over 50% lower wind loading, it opens up more installation possibilities on tower cranes.

Mount panels to towers, jibs or ballast blocks, or wrap them around towers for visibility from multiple angles. The modular design makes panels easy to reconfigure or extend between projects, delivering lasting flexibility and value. Optional custom-cut corners create seamless graphics across edges for a professional finish.

From company branding and project promotion to safety messaging and seasonal greetings, WOLFF Lite puts your message where it gets noticed.
